

Hao Jose Wang

San Diego, CA | (626) 362-6668 | wendellwang468@gmail.com | [linkedin.com/in/wendellll](https://www.linkedin.com/in/wendellll)

EDUCATION

University of California, San Diego

Sep. 2024 – Jun. 2026

M.S. Data Science | GPA: 4.0/4.0

University of California, Riverside

Sep. 2021 – Aug. 2023

B.S. Molecular Biology | cum laude | Upper-Division GPA: 3.94/4.0

RESEARCH EXPERIENCE

Nan Hao Lab, University of California, San Diego

Sep. 2024 – Jun. 2026

Graduate Research Assistant

San Diego, CA

- Supported experiments using genetically modified yeast strains to study carbohydrate utilization and explore potential gastrointestinal and microbiome applications.
- Analyzed time-lapse microscopy data from single yeast cells using Python, MATLAB, and image-processing workflows to support budding and lifespan-related studies.
- Developed image-processing and quality-control workflows for large microscopy datasets, reducing repetitive analysis and manual review.

Meng Chen Lab, University of California, Riverside

Jul. 2022 – Feb. 2023

Research Assistant

Riverside, CA

- Genotyped T-DNA insertion mutants using primer design, genomic DNA extraction, PCR, and agarose gel electrophoresis for plant light and temperature signaling research.
- Analyzed confocal images in ImageJ to compare quantitative features across five experimental conditions.

INDUSTRY EXPERIENCE

BeiGene | Beijing, China

Sep. 2023 – Aug. 2024

Scientist I, R&D (Dec. 2023 – Aug. 2024) | R&D Intern (Sep. 2023 – Nov. 2023)

- Cultured TMD8 lymphoma cells, prepared NGS samples, and analyzed sequencing data for pooled screening of 29 TP53 hotspot mutations to evaluate zanubrutinib response and mutation enrichment.
- Performed Western blotting and analyzed related experimental data to assess p53 responses following Nutlin-3a treatment in TP53-wildtype, knockout, and R248Q-mutant cells.
- Analyzed cellular drug-response data using GraphPad Prism for zanubrutinib and sonrotoclax studies; cultured cancer cells for comparisons of sonrotoclax, venetoclax, and lisaftoclax.

SELECTED DATA SCIENCE PROJECTS

All of Us Clinical Data Analysis | Python, R, Survival Analysis

- Analyzed an observational cohort of 1,197 patients with type 2 diabetes using Cox proportional-hazards models to examine the association between SGLT2 inhibitor exposure and a 20% eGFR decline endpoint.

NASA Telemetry Anomaly Detection | Python, Time-Series Analysis

- Developed time-series modeling workflows for NASA telemetry anomaly detection, separating training and test data to prevent future information from entering model evaluation.

SELECTED CONFERENCE ABSTRACTS

Haitao Wang*, Hao Wang*, Yang Shi, et al. The second generation BTK inhibitor zanubrutinib (Zanu) demonstrates robust efficacy in both TP53 wildtype and mutated B cancer cells in preclinical studies. 2025.

Haitao Wang, Lin Li, Yiwen Wang, Hao Wang, et al. Sonrotoclax (BGB-11417), a selective Bcl-2 inhibitor, demonstrates better efficacy than Venetoclax and Lisaftoclax in hematological cancer cells, xenografts, and human bloods. 2026.

TECHNICAL SKILLS

Laboratory: Cell culture, NGS sample preparation, Western blotting, DNA extraction, PCR, genotyping, gel electrophoresis, Sanger sequencing

Analysis and Imaging: GraphPad Prism, ImageJ, OpenCV, survival analysis, time-series analysis

Programming and Tools: Python, R, MATLAB, SQL, Bash, pandas, NumPy, scikit-learn, Git
